WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make four, all the same: two for the enclosure plate, two for the arm plate.
Blank 150 x 40 mm of 3 mm sheet: a 20 mm flat in the middle and a 65 mm wing each side. Scribe the two bend lines 10 mm each side of the centre line.
Bend each wing 45 degrees in a vice with soft jaws, inside radius about 3 mm, so the two wings meet at 90 degrees (the V).
Two holes on the centre line of the flat, 10 mm each side of the middle: drill 3.3 mm and tap M4. File the screw tails flush later.
Fit: the flat sits on the back of a saddle plate, the V opens toward the pole; two M4 countersunk screws from the plate's front.
The 114 mm pole touches both wings 43 mm out from the bends; 60 to 140 mm poles also seat on both wings.
Check: both wings at 45 degrees to the flat, within 1 degree.
