**WHERE IT GOES**

This part in colour, its neighbours in grey

**HOW TO MAKE IT AND HOW IT FITS**

Cut 498 mm of 40 x 40 x 2 tube; square both ends (the pole end must sit flat on the plate) and deburr.

Plate end: two 6.6 mm holes straight through top and bottom walls, on the centre line, 15 and 30 mm from the end.

Head end: two 5.5 mm holes straight through, on the centre line, 418 and 478 mm from the plate end.

Drill each pair square through both walls (drill press, V-block).

Cut four crush spacers 36 mm long from 10 mm aluminium tube; they sit inside the tube on the bolts so the walls do not crush.

Fit a plastic end cap in the head end.

Check: on a flat bench the tube does not rock; holes line up top to bottom (a rod passes straight through).
