WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut a disc 122 mm across from 8 mm plate (hole saw or bandsaw and file); it must be a close sliding fit in the sleeve bore.

Edge: four holes into the edge at 45, 135, 225 and 315 degrees, 4 mm from the top face: drill 3.3 mm 12 deep and tap M4. Drill them through the sleeve's holes with the disc in place.

Face: eight 5.5 mm holes for the lower clips, 40 mm each side of the centre line and 9 mm either side of the cross line; countersink them from below so the screw heads sit flush (the pole top bears on the underside).

Fit: disc inside the top of the sleeve, top faces flush.

Check: underside flat; no screw head stands proud.
