WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut two 35 mm lengths of 50 x 50 x 5 angle.
Flat leg (goes under the rail plate): two 5.5 mm holes 30 mm out from the upright leg's inside face, 10 and 25 mm from one end.
Upright leg: two 8.5 mm holes for the post bolts. Mark them from the post: clamp the clip to the rail plate, set the post between the clips at the 35 degree tilt, and drill through the post holes.
They fall about 12 and 21 mm from the upper end, 25 and 38 mm down.
The two clips are mirror images; drill them as a pair.
Fit: M5 screws through the rail plate, nuts under the clip.
This joint sets the panel's 35 degree tilt.
Check: the rail plate sits at 35 degrees, give or take 1.
